ROYAL CARIBBEAN'S OASIS OF THE SEAS IMPLEMENTS SISCO'S A-PASS® MOBILE™ SYSTEM FOR MUSTERING AND SECURITY IDENTIFICATION

West Palm Beach, FL – December 7, 2009 – Royal Caribbean International's Oasis of the Seas, the world's largest cruise ship has chosen SISCO's (Security Identification Systems Corporation) A-PASS® Mobile™ Electronic Mustering System for the ship's passengers and crew. When the Oasis departed on its maiden voyage from Ft. Lauderdale on December 1, 2009, passengers and crew aboard the extraordinary vessel could take comfort in knowing that their voyage is protected by SISCO's most comprehensive and effective system for mustering and identification.

Royal Caribbean strives to utilize only the latest and greatest technology in every aspect of the ship's unprecedented development and design. For customers like this, SISCO's A-PASS® Mobile™ Electronic Mustering System is the natural choice among SISCO's systems for tracking, screening and identification of the ship's personnel, passengers and visitors. Coast Guard regulations and SOLAS require cruise lines to periodically hold fire and lifeboat drills. They are intended to have the crew continually rehearse and show passengers how to respond in the event of an emergency at sea. SISCO is proud of the fact that its A-PASS® Mobile™ Electronic Mustering System supports this important exercise completely.

Designed specifically for the cruise line industry, A-PASS® Mobile™ is the next generation of total ship management for marine safety and security. The wireless product meets IMO, Coast Guard, and CBP compliance requirements for Mustering, Tendering and Immigration Clearance. As a seamless add-on to existing A-PASS® products, the mobile system provides authorities and ship personnel with the flexibility to conduct screening and clearance inspections of crew, passengers and visitors on land as well as at sea.
